Mr. Phil D. Wright, MS, RS, Director
Wasatch County Health Department
Courthouse
Heber City, Utah 84032

Dear Phil:

Enclosed is a certificate dated December 16, 1981 issued to you as your Department's Standardized Foodservice Inspection Officer. Also enclosed is a copy of our standardization procedure in which the purpose of Standardization is detailed and the conditions outlined under which inspectional standardization can be retained.

You have satisfactorily demonstrated your competency to interpret the provisions of the 1980 State Foodservice Sanitation Regulations and to conduct evaluations of Foodservice establishments. This ability was demonstrated during 20 joint inspections of Foodservice establishments in Wasatch County in the period December 9, 1981 to December 16, 1981, with Mr. Richard Sweet of our staff.

We consider this to be an outstanding accomplishment, an unusual display of detailed knowledge and versatility, coming at this time when you are fulfilling the multiple roles of the Staff Sanitarian and Health Department Director.

We are pleased to certify you as a Foodservice Inspection Officer for your Health Department. Please accept our congratulations.

Sincerely yours,

James O. Mason, M.D., Dr. P.H.
Executive Director

Recreation survey completed

Wave 21 Jan 1982

"A State Parks and Recreation User Survey conducted at Wasatch Mountain State Park during the months of July, August and September, 1981, has been completed," said Earl Kohler, Park Superintendent.

The study has a two-fold purpose. First, the Utah State Parks and Recreation, a Division of the Utah State Department of Natural Resources and Energy, desired information pertinent to the future administration, operation, and development of the state park system. Second, recognizing the need to optimize every dollar appropriated, the Division sought to obtain this information from the most important person in the state parks and recreation system — the user.

The data sought came from a study conducted by four university student researchers, two from the University of Utah and two from Utah State University. A total of 2,261 parties in 31 different state park and recreation areas were asked during July, August and September, 1981, to respond to 33 questions ranging from the types of improvements (if any) they would like to see, to identification of funding sources for those improvements.

The typical overnight visitor spends an average of four days at Wasatch Mountain State Park as compared to two days at other state parks represented in the survey. Moreover, the survey shows that although Wasatch Mountain State Park is used primarily by Utah residents (92 percent), the average cost of the trip (\$137) is higher than other parks with high resident use (\$50).

The people questioned indicated that they come to Wasatch Mountain State Park primarily to golf and camp. The close proximity of the park to the Wasatch Front, the setting, and the facilities all attract use.

"We expect," Superintendent Kohler said, "that Wasatch Mountain State Park will continue to be a haven for people who want to get away from the pressures of their jobs or city lifestyles. The survey indicated that park users were very pleased with the facilities and operations, and, while we appreciate those comments, we are not ready to rest on our laurels. The need for more

campgrounds, golf carts, etc. continues and we will exert every effort to provide those items to the public," he continued.

The 22,000 acre Wasatch Mountain State Park, located at Midway, in beautiful Heber Valley, is Utah's most highly developed state park. One of

Utah's finest 27-hole golf courses is found here. The park provides extensive opportunity for camping, picnicking, hiking and affords four group-use areas and 285 camping/picnicking areas. Snowmobiling and cross-country skiing are major recreation activities during the winter.

Deer Creek Lake studied by students

"A State Parks and Recreation User Survey conducted at Deer Creek Lake State Recreation Area during the months of July, August and September, 1981, has been completed," said Leo Cox, Park Superintendent.

The study has a two-fold purpose. First, the Utah State Parks and Recreation, a Division of the Utah State Department of Natural Resources and Energy, desired information pertinent to the future administration, operation, and development of the state park system. Second, recognizing the need to optimize every dollar appropriated, the Division sought to obtain this information from the most important person in the State Parks and Recreation system — the user.

The data sought came from a study conducted by four university student researchers, two from the University of Utah and two from Utah State University. A total of 2,261 parties in 31 different state park and recreation areas were asked during July, August and September, 1981, to respond to 33 questions ranging from the types of improvements (if any) they would like to see, to identification of funding sources for those improvements.

Results of the survey revealed that Deer Creek Lake State Recreation Area is a popular attraction for a variety of water related activities. The most popular activities visitors participate in while at the park include

fishing, sailing, waterskiing, windsurfing, boating, camping and swimming.

The study indicated that people were staying closer to home. Visitors participating in the survey indicated that their main reasons for visiting Deer Creek Lake State Recreation Area, as opposed to some other area, was due to its proximity to home and its setting.

Users who had suggestions for improvements most often cited the need for additional and improved rest rooms, more shade, and better beaches.

"We serve the Wasatch Front," said Superintendent Cox, "with 80 percent of the visitors originating from Salt Lake and Utah Counties. We try to provide adequate facilities for our visitors so their stay at the park will be a pleasant one. It seems, though, we never get caught up with the demand. We just keep chipping away at it, however, and hope the people will understand that these improve-

ments take money, which, at present, is in short supply."

Located in the southwest corner of beautiful Heber Valley, Deer Creek Lake State Recreation Area consistently provides some of Utah's finest fishing. Facilities include a concrete boat launching ramp, modern restrooms with showers, sewage dump, fishing cleaning stations, 44-unit campground, and paved parking area for 250 vehicles.

MEMO

TO: Wasatch County Commission and Planning Commission

FROM: Wasatch County Health Department

RE: Boat Camps at Deer Creek Reservoir

The Wasatch County Board of Health met on October 26, 1981. One of the items of discussion was the boat camps that are located around Deer Creek Reservoir and the health requirements that must be met by these camps. The board determined that the camps must meet the minimum standards as outlined in the "Recreational Vehicle Park Sanitation Regulations". Two of the major concerns are the water supply and the waste water disposal which we have outlined below that must be addressed to meet the requirements of these regulations.

Water Supply

There must be a source capacity of 100 gallons per day per vehicle space and a storage volume of 50 gallons per vehicle space per day. These requirements do not include water for outside use and fire protection. The system must meet the requirements of the Utah State rules and regulations relating to drinking water requirements.

Waste Water

Waste water is to be discharged into a public water system or into a system meeting the requirements of the Utah State Code of Waste Disposal Regulations. Design is based on not less than 125 gallons per day per recreational vehicle space. If a sewer is not provided a sanitary dump station of approved design for waste water originating in any recreational vehicle must be provided. The design shall be based on not less than 50 gallons per day per "self contained" trailer space.

Any camp that accepts patrons with dependent vehicles, tent, etc., must have a service building equipped with restrooms. The health code requires one water closet per 50 males and one water closet per 25 females. It requires one urinal per 50 males and one lavatory per 50 males and one per 50 females.

As a board of health, we feel that with these health requirements as well as additional requirements that the planning commission and state park requires, the possibility of health hazards would be greatly reduced.
